## AFTER CARE INSTRUCTIONS

(Use **ONLY Vaseline, or A&D ointment**) NO ANTIBIOTIC OINTMENT

You may use an ice pack to reduce possible swelling in the next 24 hours. On and off for 10 minutes.

### MORNING and NIGHT for the next 5 days

1. With clean fingers or a cotton swab, apply a small amount of ointment and rub it in.
2. Tissue blot to remove the excess ointment. You shouldn't be able to see it. After 24 hours you may apply the rest of your makeup.
3. DO NOT Swim or Sauna for 1 week.
4. DO NOT Pick, Scratch, Wash or Rub treatment area for 2 weeks. (the new skin is very fragile and shouldn't be disturbed.)
5. Please keep the area away from dirt. If the area becomes wet and weepy, wash gently with liquid antibacterial soap, rinse and pat dry. Do not put any more ointment on the treated area. (This is very rare)
6. If you feel that the area may be getting infected, (extremely rare) you can wash gently with liquid antibacterial soap, pat dry and apply Neosporin antibiotic ointment morning and night for 1 day. If this doesn't clear up please contact your physician. (We prefer not to use this type of ointment for healing because it may cause the color to heal too light.
7. Schedule your follow-up appointment to be completed within a 4 -12 week time period.

## WHAT TO EXPECT

### BROWS AND EYELINER

The first 24 to 48 hours you may experience slight bruising and swelling in the eye area. Brows – not much difference. For a week the color will appear darker than desired.

Between the 5<sup>th</sup> and 7<sup>th</sup> day following the brow and eyeliner application, you will notice flaking or exfoliating of a thin layer of dead skin cells.

Once this layer has been exfoliated the remaining color will appear to be 20 – 40% lighter. This is normal. After the third week the color will show through the skin a little more and look darker.

### LIPS

The lips will be slightly swelled for about 24 hours and exfoliate similar to chapped lips on or about the third day.

After the LIP exfoliation the color will seem to have disappeared. This is normal. Around three weeks later the color will start to reappear.

A second application is typical and should be scheduled within 4 – 12 weeks. This appointment is for fine tuning the design, color, tone and thickness of the color application. The follow-up is included.

If you have any questions or concerns you may reach me, **Wanda Enoch at 888-461-4441.**
